Our guest today is Mr. Zegers from the Alufinish GmbH & Co. KG. So without further ado, let's get down to business.

Mr. Zegers, could you tell us how and when you came to your position on the GSB Board?

I have been on the GSB Board since 2015. In that year I was elected to the GSB Board during the general assembly. I had known the GSB for many years and at an earlier meeting I was asked if I would be interested in becoming a member of the Board.

If you are a candidate for such an honorary position, then you must be enthusiastic about the work. What inspires you about your activity?

My inspiration is the substrate aluminium! To be more precise, it is the use of aluminium in architectural and industrial applications. My goal is that aluminium becomes the substrate of choice. Being a member of the GSB Board helps me to achieve this goal.

For Mr. Rapp, who has been interviewed earlier, GSB was unique in its focus on powder coating and its openness to future topics. What makes the GSB so unique for you?

Like you mentioned before, the GSB is an international group of volunteers who have come together in a quality community with the aim of providing added value to the industry.

Finally we come to the end of the interview. What advantages would it bring to a company if it became a member of GSB?

There are of course many advantages! First and foremost, we set a very high level of standards with our quality guidelines, whereby we can guarantee safeness and quality to architects, builders and metalworkers. Important decisions are made by the member companies themselves. This is possible, in part due to the fact that the GSB is centrally organised and independent. In addition to this, we are up to date when it comes to development. In the field of research and development, GSB acts as a "think tank" for the surface treatment of aluminium - not least with the aim of paving the way for sustainable developments.
